

The Sliding Door Company is proud to be a part of huge efforts towards producing, assembling, shipping and installing state of the art interior sliding door solutions and support our nation's efforts to preserve the environment.

Environmentally Friendly

Our products are made primarily of glass and aluminum which are both recyclable. The innovative design and production procedures preserve the environment from the beginning of the process right through installation and use in your new or existing office, residential or facility tenant improvements projects.

Since our products do not require any harsh chemicals for cleaning, we also help to preserve indoor air quality at all times while keeping maintenance to an absolute minimum.

Benefits

We give architects, designers and our clients the ability to make sustainable choices. 98% of our sliding glass panels are recyclable.

Our innovative & flexible solutions were designed to be used and re-used if a client moves in the future.

Occupants will experience an increase in well being and productivity while sitting in an environment that is uplifting and functional.

In office environments, the team will benefit from improved employee retention, improved morale and reduced absenteeism. Companies will also enjoy the reduced liability associated with poor indoor air quality.

Energy and Atmosphere

The Sliding Door Company factories and distribution centers use energy efficient systems and we constantly monitor performance for effectiveness.

Our product line gives off the absolute minimum waste and none of our materials are hazardous to the environment.

Materials & Resources

The Sliding Door Company uses materials with the least environmental impact at the production and installation stages.

Due to the simplicity of our product line, we use very few materials and keep the installations easy and simple.

Any recycled aluminum and glass can be reused so there is no waste from the manufacturing stage through final use at the installation site.

Pre-consumer: 10% recycled content

98% of our product line is recyclable (glass and aluminum). The only items that are not fully recyclable are the wheel mechanisms.

Indoor Environmental Quality

Our entire product line helps commercial & residential clients alike to reduce and manage sources of indoor pollutants.

We give occupants a strong connection to the outdoor environment as light comes through our interior sliding door solutions while we still provide privacy.

There are no hazardous wastes to deal with and no materials that emit chemicals into the air.

Innovation & Design Process

Our patented features include a locking clamp that holds each panel to the groove of the bottom track for the ultimate in safety.

The Sliding Door Company product line is perfect for Green construction projects.

We set the pace in terms of design innovation and flexibility. Choose from a variety of glass types and frame color choices in addition to the stylish divider strips that make our product line a striking and functional essential for your home or office.

American Disabilities Act

1. Sliding panels have a push pressure of only 3 pounds.
2. Tracks are very low profile in design at only 3/8" high and can be easily recessed.
